to  
production

we master  
complexity

The Design-to-Production GmbH is looking as of now for a **Consultant (m/f) for Programming in the context of CAD/CAM and parametric 3D modelling** for a 100% employment in Erlenbach ZH, Switzerland.

You as applicant have a degree (Master or similar) in Architecture and/or Civil Engineering. Your portfolio shows your interest in the technical and execution-oriented aspects of planning, especially in digital methods of planning and fabrication as well as technical interfaces throughout the planning and fabrication process.

You are very engaged with programming (within and beyond the realms of architecture) and have reached a level where you would call yourself a "programmer". Becoming familiar in new programming languages and environments comes easy to you. You have experience programming in a team and using versioning systems. Meaningful structure and reusability of program code is important for you. You are able to solve given tasks autonomously by using programming, and you are looking forward to making programming your main duty.

#### Specific Requirements:

You are an expert using the CAD environment **Rhinoceros** by McNeel and the corresponding SDK **RhinoCommon**. You are proficient in the programming languages **C#, Python, C++** and **JavaScript**. You have experience in Web Development and User Interface Design.

You speak, read and write English fluently and are ready to take responsibility in a small, international team from the first day. You can speak at least some German and are willing to improve further in this language.

If this description matches your profile, please send CV and Portfolio to Johannes Kuhnen (jobs@designtoproduction.com). Applications via e-mail (PDF) are very welcome.
